Article type	Received	Accepted	Published
Research/Review Article	DD Month YYYY	DD Month YYYY	DD Month YYYY

Abstract

[Write a structured or unstructured abstract of approximately 150–250 words. Briefly state the background, objective, methods, principal results and conclusion. Do not include citations unless essential.]

Keywords

[Provide 4–7 keywords separated by semicolons; avoid repeating words already used in the title.]

1. Introduction

[Introduce the topic, establish the research problem, summarise relevant literature, identify the research gap and state the purpose of the study. Use genuine and verifiable references.]

2. Objectives or Research Questions

1. [State the first specific objective.]
2. [State the second specific objective.]
3. [Add research questions or hypotheses where applicable.]

3. Materials and Methods

[Describe research design, study area, population/sample, inclusion criteria, tools or instruments, data-collection procedure, ethical approval/consent and statistical or qualitative analysis. Provide enough information for replication.]

4. Results

[Present findings in a logical sequence. Report the relevant sample size, descriptive statistics, test statistics, confidence intervals, effect sizes and exact p values where appropriate. Do not duplicate the same data in both text and tables.]

Table 1. Sample format for reporting results

Variable / Group	n	Mean ± SD	Test result
Group A	[00]	[00.00 ± 0.00]	[t/F/χ^2 = ...]
Group B	[00]	[00.00 ± 0.00]	[p = ...]
Overall	[00]	[00.00 ± 0.00]	[Effect size = ...]

Note. Define all abbreviations and statistical symbols. Mention the source when data are adapted or reproduced.

Figure 1. [Concise and informative figure caption]

[Insert a clear, high-resolution figure here]

Source: [Original figure / author-created / full citation and permission details if reproduced.]

5. Discussion

[Interpret the findings in relation to the objectives, hypotheses and previous research. Explain agreements, differences, practical meaning, strengths and limitations. Avoid simply repeating the Results section.]

6. Conclusion

[State the principal conclusion supported by the evidence. Add practical implications and, where relevant, concise future research directions. Do not introduce new results.]

7. Limitations

[Describe important methodological, sampling, measurement or generalisability limitations.]

Declarations

Ethics approval: [Approval committee/institution, approval number and date, or "Not applicable" with justification.]

Informed consent: [State how consent was obtained, where applicable.]

Conflict of interest: [The author(s) declare no conflict of interest / provide details.]

Funding: [Name the funding agency and grant number, or state that no external funding was received.]

Author contributions: [Briefly describe each author's contribution.]

Data availability: [State where supporting data can be accessed, or explain any justified restriction.]

References

Use one recognised citation style consistently throughout the manuscript. Every in-text citation must appear in the reference list, and every listed reference must be cited in the text. Include DOI or stable URL when available.

Journal article example

Surname, A. A., and B. B. Surname. "Title of the Article." Journal Title, vol. 10, no. 2, 2026, pp. 100–112. https://doi.org/xx.xxxx/xxxxx.

Book example

Surname, A. A. Title of the Book. 2nd ed., Publisher, 2025.

Web report example

Organisation Name. Title of the Report. Year, stable URL. Accessed DD Month YYYY.

How to cite this article

[Surname, Initials. "Article Title." Frontiers of Integrated Academic Research, Vol. I, Issue 1, 2026, pp. XX–XX. https://fiarjournal.in/article/article-id.]

Formatting and Submission Checklist

- Submit an editable Microsoft Word file in English or Hindi.
- Use A4 page size, clear headings, readable typography and continuous page numbers.
- Provide author names, affiliations, corresponding-author email and ORCID where available.
- Number tables and figures consecutively and cite each one in the text.
- Use only genuine, traceable references and check all DOI/URL details.
- Remove plagiarism, fabrication, duplicate publication and undeclared AI-generated or manipulated content.
- Attach ethics approval, consent, permissions and declarations where applicable.
- A valid plagiarism/similarity report may be submitted to support initial screening; it does not guarantee acceptance.
